

Climate Change Forum

A leading scientist has agreed to give a presentation about weather systems and climate change. Possibly this may evolve into a symposium looking at the engineering requirements to meet net zero (STEM webinar recording), can these be realistically achieved. If not, what does 3.5 deg of warming look like, and what steps should our region be taking to meet what has been agreed to by all our major political parties. Details will be announced as the symposium takes shape

Fossil Day

Museum Victoria has been approached to contribute skills to a "Fossil Roadshow" akin to Antiques roadshow only with everyone bringing along local fossil finds, plus a talk. Details to announced when finalised.
