

## **Science Course**

Merryl Tanner and Gail Lemmens 5 sessions. Tuesday afternoons, 1.30 to 3.30, at Deakin University as detailed in the calendar

This course is primarily aimed at anyone with little knowledge of science and how it works. It will be hands on, with opportunity for discussion and interactions. Simple experiments, videos, and notes will be used to illustrate the principles which underpin science and a major aim is to have fun rather than learn a whole lot of facts.

For example, did you know that repeated observations confirming an idea does not logically make that idea more correct, but a single observation which contradicts an idea immediately makes the original idea incorrect and in need of revision...think about it.
